Our project's main function:

**Search for books and their  
brief description**

[About us](#) [Search](#)[Login](#) [Register](#)

### We know what you want

We have an excellent book search engine where everyone can find what they want at the moment.

### We have a rating of books

The 21st century is a dynamic time, where you have to constantly evolve and here you have to run to stand still. Anyone who does not read good books has no advantage over someone who does not know how to read them.

### Tracking progress

You can add already read books and see your progress and write a small review for yourself

[About us](#)[Search](#)[Login](#)[Register](#)

# The most rating books

Twilight (Twilight #1)

Stephenie Meyer

4597666

**Add book**

# Technology stack

## Express.js

- Easy to configure and customize.
- Allows you to define routes of your application based on HTTP methods and URLs.
- Includes various middleware modules which you can use to perform additional tasks on request and response.

## Pug.js + CSS

- Easy to write boilerplate HTML code.
- Features like conditions, loops, includes

# Problems that we encountered

1

**Integration backend with database**

2

**Creating triggers**
